Windows Live Photo Gallery Windows Live Photo Gallery is an easy-to-use application that enables you to display, edit, and organize photos. It comes with Windows 7, but it is included with Windows 8. Some of its advantages include organizing, editing, and sharing photos. To start with, use the free version of Windows Live Photo Gallery to see how it works. You can use it to view, organize, and edit all your photos. ## Beginning Your Organization To get the most out of the years of work you spend collecting your photos and artwork, you need to be prepared. Like a backpack for your images, you need to develop routines for organizing your photos so that they are accessible and manageable. Once you're organized, you can spend more time capturing great images. ## Breaking down albums Start by creating a folder structure to house all your images. Imagine the folder tree like a hierarchy, and organize your images into groups. For starters, you may want to organize all your images in the following manner: * **Home:** All photos taken in your home or studio. * **Personal:** All your photos taken at home or work. * **Business:** All your photos taken as a personal or business attribute. * **School:** All the photos from any day of the week at school. * **Travel:** All the photos from your trips. A more organized way to organize your photos would be to place all the images in subfolders based on their date taken. If you have a lot of images, and you want to organize them in a way that helps you find them by subject and by the year, you can

Common Photoshop Skills This list contains a number of skills taught in Photoshop that are common among designers. 1. Vector Actions: The Vector Actions panel appears when you click the "Vector Actions" button on the lower right of the Photoshop window. Use this panel to create unique edits. 2. Photoshop Looks: Looking effects aren't often used in web design. Photoshop makes them easy for designers to create. 3. Learning Photoshop You don't need Photoshop experience

to learn to use Photoshop. If you feel like you don't understand what you're doing, go back to the basics. A few hours of practice with some beginner tutorials can go a long way. 4. Photoshop Tip: Inspired by Adobe's Instant Tips and HD Tips videos. 5. Photoshop Trick: Use the Filter > Pixelate > Cutout filter to add a designer-made look to your photos. 6. High-Quality Fixing: This is a hand-drawn vector stamp that has been added to the picture. This is an example of a hand-drawn vector stamp. 7. Photoshop Trick: Use the Layer > Merge Down command. 8. Photoshop Trick: Use the Filter > Pixelate > Linear filter. 9. Photoshop Trick: Use the Filter > Convert to Profile ... command to convert your image to a sRGB profile. Pro tips 10. Windows Photoshop: Due to Windows 10's legacy, it is not recommended to use Windows-based Photoshop. However, if you're in a pinch, you'll be able to use it. 11. Photoshop Tip: Access other Photoshop features with the keyboard shortcuts: CTRL+ ALT+ F (for the File menu) CTRL+ ALT+ P (for the Preferences window) CTRL+ ALT+ S (for the Save menu) CTRL+ ALT+ K (for the Quit menu) CTRL+ ALT+ V (for the Zoom menu) CTRL+ ALT+ M (for the More menu) 12. PARIS (Reuters) - French carmaker Renault RENA.PA agreed on Wednesday to pay 14 billion euros (\$16.3 billion) to Renault shareholders and offer them a 4.9 percent stake in the carmaker if they accept a partial merger. Slideshow (3 images) The tie-up would allow Renault to concentrate on more profitable, but lower margin, heavy and mid-sized vehicle operations, while dividing its shares between Renault's 33 percent and French government's 14.8 percent. The deal, struck on Tuesday night, will be voted on by both Renault and Nissan shareholders at a special meeting on March 9 and 10. Renault told trade unions on Wednesday it was "extremely vigilant" about the threat of a referendum in Switzerland asking the Swiss parliament to stop the merger. "This text must be rejected," said Philippe Martinez, head of the main CFDT union, adding that those calling for a referendum are trying to preserve the status quo. The automaker has been in crisis since October when Carlos Ghosn, its ousted chairman and one-time successor to Renault CEO Jean-Dominique Sordet, was arrested in Japan, accused of under-reporting his compensation. The company, Renault, Nissan and Mitsubishi Motors have now emerged from a board shake-up forced by the arrest and have acted to put what both sides saw as the best face on the crisis. The union trade delegations said they were holding meetings with government officials and would not call for a referendum over the deal. France's Insee economic services institute said that the freeze on public works projects in the company's second-largest division should still hit the company hard. "Suppose the merger had not happened," Insee economists said. "The financial impact on Renault of public works contracts should have been manageable (15 billion euros)." Under the revamped deal, Renault will get its own management and structure, and Renault chairman and CEO Thierry Bollere, currently chairman of the Renault-Nissan-Mitsubishi Alliance, will also take the CEO role at Renault. Renault shareholders will get a 4.9 percent stake in the merged company, giving them a stake worth around 12.5 billion euros in Renault. Renault's existing shareholders will retain the larger equity stake. The deal is subject to Japanese and French competition authorities◆

this method is a bit slower than our adaption for the "easy" case of IOPredict-based adaptive sampling (see Table \[table:comparison\]). We can also simulate the realistic case with associated uncertainty for the "easy" case as shown in the last column of Table \[table:adaptive_sampling\], where the samples were simulated over 10,000 iterations. This indicates that the performance gain with our proposed adaptation is reasonable even when a realistic amount of uncertainty is considered. Conclusions \[#sec:conclusions\] ===== We have proposed an adaption of IOPredict method for fast and accurate probabilistic forecasts of wind fields in a wind energy forecasting system. The main contributions of this work include: First, by adding a weather realization mechanism, we generate the samples needed to forecast the next hour based on prior iteration's weather realization, which requires no extra communication or computational effort. Second, we optimize the approach by formulating a probabilistic forecast update equation, and designing a simple adaption of a heuristic function. A heuristic function to evaluate the effectiveness of the adaptation is proposed, and its effectiveness is evaluated using the wind power production of the Bergen area. The results show that the proposed approach delivers an accurate and fast probabilistic forecast, which is valuable in wind energy forecasting.
